INTRODUCCIION

From series of experimentations conducted over 20 years, I found that the main hurdle of learning and teaching any subject of any standard is the lack of reading skills and that the only way to overcome this hurdle is to learn pronouncing skills. Towards the end of 2020, I developed the Concept of Sub-Syllables in English language which is a new system of learning English pronouncing skills efficiently. By applying the Concept of Sub-Syllables in English language, I have developed a New Model of Spelling-Bee Competition which is applicable to all the students of any standard. Spelling-Bee Competition is the most effective literary activity for learning English pronouncing skills.

I. Concept of Sub-Syllables in English language

A sub-syllable is defined as an alphabet/letter or group of alphabet/letter which forms a part of a syllable (if the word is multi-syllable)/monosyllable. The possible sounds of every sub-syllable are finite and that the sound of every sub-syllable depends on the parts of speech, structure and origin of a word. The sub-syllables include all the sounds of vowels (monophthong/diphthong/ triphthong) and consonants (voiced and voiceless). The **Concept of Sub-Syllables** is a new system for learning English pronunciation efficiently. It has enabled to pronounce every word in an English dictionary correctly and easily, indicates and explains the silence of sounds when pronouncing some words, identifies different words having the same pronunciation and different words with similar pronunciations, has enabled to pin-point the differences between the British and American English pronunciations. It has enabled to explain how the letter-r and l control the vowel sounds and how the vowel sounds control r-sound in British pronunciation. By applying, Mathematics and the Concept of Sub-Syllables, I have formulated the general rules of English pronunciation which give a single pronunciation to every word in an English dictionary without giving any specific preference to British or American accent. If a word has more than one pronunciation, then the preferred pronunciation is underlined. It has paved a new way to non-native speakers to learn English pronouncing skills without strictly following the British or American accent, which can be understood by the native speakers. Significantly, it has enabled to write the spellings of all the IPA/sounds (of sub-syllables/syllables) of foreign origin reflected in English language. The Concept of Sub-Syllables is applicable to any existing language in the world and could herald the beginning of learning foreign languages in a new way.

1. Primary Sounds of English Alphabet

The first step of learning English pronouncing skills is to pronounce and hear the primary sounds of English alphabet distinctly and correctly. The primary sounds of English alphabet are the sounds

which we pronounce the letters in spelling of a word/abbreviation. The vowels of the primary sounds are classified on the basis of monophthong and diphthong, and that of consonants (actually, of the phonetic sounds) are broadly classified on the basis of voiced and voiceless.

Primary sounds of alphabet.

| | | | | | |
|---------|----------|-------------|---------|--------------------------|---------|
| a (ay) | b (bee) | c (see) | d (dee) | e (ee) | f (ef) |
| g (jee) | h (aych) | i (I) | j (jay) | k (kay) | l (el) |
| m (em) | n (en) | o (oh) | p (pee) | q (kyoo) | r (ahr) |
| s (es) | t (tee) | u (yoo) | v (vee) | w (<u>dub</u> -uhl-yoo) | |
| x (eks) | y (wy) | z (zed/zee) | | | |

2. Construction, Spellings and classification of English IPA.

(i) Construction of the sounds of English IPA

- a) The author’s phonetic sounds are constructed using the letters - a, e, h, i, o, u, w, y.

- b) There is a major shift in pronouncing English IPA of consonants by applying the concept of sub-syllables (using the sound of faint schwa-uh).The faint schwa is used after a consonant if it is before a vowel sound and before the consonant if it is after a vowel sound.

- c) The sound of [e/ɛ] (written as e in the spelling) and [æ] (written as a in the spelling) in the spelling of the pronunciation are both short and frontal vowel sound (monophthong), the only difference is that the sound of [æ] is produced with mouth open wider than that of [e/ɛ]. For simplicity, the phonetic sound (Author’s) of [e/ɛ] and [æ] are pronounced as *auh* (short& low) and *ahuh/ahuh* (short&high) respectively.
 The sound of [ɑ:](written as ah in the spelling) in the spelling of the pronunciation is a long (monophthong), back vowel sound and is produced with mouth wide open.
 The sound of [ɑ:] is pronounced as *ahh* (long & high).

- d) The sound of [i:] (written as ee in the spelling) in the spelling of the pronunciation is long (monophthong), high, close and frontal vowel sound. The sound of [ɪ] (written as i in the spelling) in the spelling of the pronunciation is short (monophthong), low, close-mid and frontal vowel sound. For simplicity, the phonetic sound (Author’s) of [i:] and [ɪ] are pronounced as *ee* (long&high)(which is the primary sound of the vowel - e) and *eu*h (short&low) respectively.
 The sound of [i](written as *i* in the spelling) in the spelling of the pronunciation is short (monophthong), high, close-mid and frontal vowel sound. For simplicity, the phonetic sound (Author’s) of [i] is pronounced as *ehuh* (short &high).

- e) The sound of [ə](full schwa) and [ɚ] (faint schwa) in the spelling of the pronunciation are both short and central vowel sound, the only difference is that the sound of [ɚ] is produced little

shorter than that of [ə]. For simplicity, the phonetic sound (Author's) of [ə] and [ɚ] are written as uh (short&low) and uh (shorter and low) respectively.

The sound of [ə](written as uh in the spelling) and [ʌ](written as u in the spelling) in the spelling of the pronunciation are both short(monophthong) and mid- vowel sound, the difference is that the sound of [ʌ] is a back vowel sound and is produced mouth little more open than that of [ə] which is a central vowel sound. For simplicity, the phonetic sound (Author's) of [ə] and [ʌ] are pronounced as uh (short&low) and uhh (short and high) respectively. The sound of [ə] (written as uh in the spelling) and [ɜ:]/[ɝ:](written as uuhh/ur in the spelling) in the spelling of the pronunciation are both central and mid-vowel sound, the difference is that the sound of [ɜ:]/[ɝ:] (long and monophthong) is produced with mouth little more open than the sound of [ə](short and monophthong). For simplicity, the phonetic sound (Author's) of [ə] and [ɜ:]/[ɝ:] are pronounced as uh(short&low) and uuhh/uuhhr (long and high) respectively.

(f) The sound of [ɒ](written as o in the spelling) is a short (monophthong), back vowel sound and is produced with mouth wide open. Using the concept of sub-syllables, the sound is pronounced as *ouh* (short).

The sound of [ɔ:](written as aw in the spelling) is a long (monophthong), open-mid and back vowel sound. For simplicity, the sound is pronounced as oo (long).

The sound of [ɔ](written as aw in the spelling) is a short (monophthong), open-mid and back vowel sound. For simplicity, the sound is pronounced as oo (short). The sound of [u:](written as oo in the spelling) is a long (monophthong), close and back vowel sound. For simplicity, the sound is pronounced as *uhwoo* (long).

The sound of [u](written as uu in the spelling) is a short (monophthong), close and back vowel sound. For simplicity, the sound is pronounced as *uhwuu* (short).

The sound of [ʊ](written as uu in the spelling) is a short (monophthong), close and near back vowel sound. For simplicity, the sound is pronounced as *uhwuu* (short).

The sound of [əʊ]/[oʊ] (written as oh in the spelling) is a diphthong, open-mid and back vowel sound. For simplicity, the sound is pronounced as (*uhuhwuu*)/(*ouhwuu*) which is the primary sound of the vowel - o.

(g) The sound of [ɔɪ](written as oi in the spelling) and [aʊ] (written as ou in the spelling) are both diphthong. The sound of [aʊ] is produced with the mouth more wide open than that of [ɔɪ]. For simplicity, the sound of [ɔɪ] and [aʊ] are pronounced as *ouhy* and *ahuhwuu/ahuhwuu* respectively.

The sound of [eɪ](written as ay in the spelling) and [aɪ] (written as I/y in the spelling) are both back vowel sound and diphthong. The sound of [aɪ] is produced with the mouth more wide open than that of [eɪ]. For simplicity, the sound of [eɪ] and [aɪ] are pronounced as *auhy* (which is the primary sound of the vowel – a) and *ahuhy* (which is the primary sound of the vowel - i) respectively.

(ii). The spellings of English IPA/the corresponding letter(s) in the spellings of pronunciation/classification of vowels & consonants.

The spellings of English IPA/the corresponding letter(s) in the spellings of pronunciation/classification of vowels & consonants by applying the Concept of Sub-Syllables. All vowels are voiced whereas some consonants are voiced and other consonants are voiceless.

II. New Model of Spelling-Bee Competition

The judges give British pronunciation (BPrn) and American pronunciation (APrn), parts of speech and the origin (if the word is of foreign origin) of every word without giving the meaning of the word. By applying Mathematics and the Concept of Sub-Syllables, I have formulated the general rules of English pronunciation which produce a single pronunciation to every word in an English dictionary without giving any specific preference to British or American accent. If a word has more than one pronunciation, then the preferred pronunciation is underlined. I have found that the correlation between the spelling of every word and the pronunciation of the word. So, while preparing for Spelling-Bee Competition, the participants shall first memorise the pronunciation of the underlined pronunciation and then the spelling of the word.

Main points to remember.

1. The letter-a in the pronunciation of a word takes the sound (ahhuh)[æ] (BPrn) and (ahuh)[æ] (APrn). Illustrations: a cappella (a-kuh-pel-uh/ah-kuh-pel-uh)<It>, actor (ak-tuh/ak-tuhr)(n), actress (ak-truhs)(n), Adriatic (ay-dri-at-ik/ad-ri-at-ik)(adj), aghast (uh-gahst/uh-gast)(adj), agitprop (aj-it-prop/aj-it-prahp)<Rus>, apathy (ap-uh-thi)<Gk>, Apatosaurus (ap-uh-tuh-saw-ruhs/ap-uh-tuh-saw-ruhs)<Gk>, aromatic (ar-uh-mat-ik/er-uh-mat-ik)(adj), arrant (ar-uhnt/er-uhnt)(adj), Asiatic (ay-zi-at-ik/ay-zi-at-ik)(adj), apathetic (ap-uh-thet-ik/ap-uh-thet-ik)(adj), barrel (bar-uhl)(n/v), barrister (bar-i-stuh/bar-i-stuhr)(n), barrow (bar-oh)(n), bastion (bas-ti-uhn)(n), bat (bat)(n/v), batch (bach)(n), bicameral (by-kam-uhr-uhl/by-kam-uhr-uhl)<Lat>, blasphemy (blas-fuh-mi)(n), blast (blahst/blast)(v), bypass (by-pahs/by-pas)(v/n),
2. The letter-oh in the pronunciation of a word takes the sound (uhhwuu)[əʊ] (BPrn) and (ouhwuu)[oʊ] (APrn). 4. The sound of *t̥*.

The letter- *t̥* in the spelling of pronunciation (only in APrn) of a word takes a brief sound of d (*duh/uhd*) (voiced). The sub-syllable-*t̥* never takes the sound-*t̥* in the American pronunciation if it is the first/last sub-syllable of a word. The sub-syllable- *t̥* takes the sound- *t̥* in the American pronunciation if it is followed by the sound- *i/i/oh/uh/uh* in the pronunciation of the word provided the sub-syllable is generally preceded by the voiced sound. All vowel sounds are voiced.

CONCLUSION

In the process of formulating and producing the above new system of learning English pronouncing skills, I have already pronounced all the words of Cambridge Advanced Learner's Dictionary (4th Edition) and Oxford Advanced Learner's Dictionary (10th Edition) with lots of foreign words from other dictionaries without using IPA transcriptions. British pronunciation (BPrn) and American pronunciation (APrn), parts of speech, preferred underlined pronunciation and the origin (if the word is of foreign origin) of every word are given explicitly. The new model could be effectively used for conducting Spelling-Bee Competition for every standard of students involving large number of participants in any part of the world.
