## INTRODUCTION

From series of experimentations conducted over 20 years, I found that the main hurdle of learning and teaching any subject of any standard is the lack of reading skills and that the only way to overcome this hurdle is to learn pronouncing skills. Towards the end of 2020, I developed the **Concept of Sub-Syllables** in English language which is a new system of learning English pronouncing skills efficiently. By applying the Concept of Sub-Syllables in English language, I have developed a **New English Pronouncing Skills Training Format**. By applying Mathematics and the Concept of Sub-Syllables in English language, I have formulated the general rules of English pronunciation which produce a single pronunciation to every word in an English dictionary without giving any specific preference to British or American accent. If a word has more than one pronunciation, then the preferred pronunciation is underlined. Some words of foreign origin are pronounced in two ways. The first way is from the Oxford Advanced Learner's Dictionary (10<sup>th</sup> Edition) and the second way is from the Cambridge Advanced Learner's Dictionary (4<sup>th</sup> Edition) which bring out the different ways of pronunciation by the two standard dictionaries. This article covers all the aspects of English pronunciation. I'm claiming that if any person can pronounce every word of this article, then he/she will be able to pronounce every word correctly in Cambridge Advanced Learner's Dictionary (4<sup>th</sup> Edition) and Oxford Advanced Learner's Dictionary (10<sup>th</sup> Edition).

### I. **Concept of Sub-Syllables** (in English language).

A sub-syllable is defined as an alphabet/letter or group of alphabet/letters which forms a part of a syllable (if the word is multi-syllable)/monosyllable. English is a non-phonetic language. However, the possible sounds of every sub-syllable are finite and that the sound of every sub-syllable depends on the parts of speech, structure and origin of a word. The sub-syllables include all the sounds of vowels (monophthong/diphthong/triphthong) and consonants (voiced and voiceless). The **Concept of Sub-Syllables** is a new system for learning English pronunciation efficiently. It has enabled to pronounce every word in an English dictionary correctly and easily, indicates and explains the silence of sounds when pronouncing some words identifies different words having the same pronunciation and different words with similar pronunciations, has enabled to pin-point the differences between the British and American English pronunciations. It has enabled to explain how the letter-r and l control the vowel sounds and how the vowel sounds control r-sound in British pronunciation. By applying, Mathematics and the Concept of Sub-Syllables, I have formulated the general rules of English pronunciation which give a single pronunciation to every word in an English dictionary without giving any specific preference to British or American accent. If a word has more than one pronunciation, then the preferred

pronunciation is underlined. The underlined pronunciation of a word indicates generally the maximum number of correct letters of the spelling of the word. It has paved a new way to non-native speakers to learn English pronouncing skills without strictly following the British or American accent, which can be understood by the native speakers. Significantly, it has enabled to write the spellings of all the IPA/sound of sub-syllables and syllables of foreign origin reflected in English language. The Concept of Sub-Syllables is applicable to any existing language in the world and could herald the beginning of learning foreign languages in a new way. The applications of the Concept of Sub-Syllables in English language are reflected in this article which covers all general aspects of teaching and learning of the English pronunciation. The main objective of this article is to enable both the students and teachers learn to pronounce all the sounds of IPA and sub-syllables/syllables of foreign origin related to English language correctly and easily.

## 1. Primary Sounds of English Alphabet

The first step of learning English pronouncing skills is to pronounce and hear the primary sounds of English alphabet distinctly and correctly. The primary sounds of English alphabet are the sounds which we pronounce the letters in spelling of a word/abbreviation. The vowels of the primary sounds are classified on the basis of monophthong and diphthong, and that of consonants (actually, of the phonetic sounds) are broadly classified on the basis of voiced and voiceless.

### Primary sounds of English alphabet.

a (ay)	b (bee)	c (see)	d (dee)	e (ee)	f (ef)
g (jee)	h (aych)	i (I)	j (jay)	k (kay)	l (el)
m (em)	n (en)	o (oh)	p (pee)	q (kyoo)	r (ahr)
s (es)	t (tee)	u (yoo)	v (vee)	w ( <u>du</u> b-uhl- <u>yoo</u> )	
x (eks)	y (wy)	z (zed/zee)			

## 2. Construction, Spellings and classification of English IPA.

### (i) Construction of the sounds of English IPA

- The author's phonetic sounds of vowels are constructed using the letters - a, e, h, i, o, u, w, y.
- There is a major shift in pronouncing English IPA of consonants by applying the concept of sub-syllables (using the sound of faint schwa-uh). The faint schwa is used after a consonant if it is before a vowel sound and before the consonant if it is after a vowel sound.
- The sound of [e] (written as e in the spelling) in the spelling of the author's pronunciation is a short, close-mid, high-mid and frontal vowel sound (monophthong). The sound of [æ] (written as a in the spelling) in the spelling of the author's pronunciation is a short, open-mid, low-mid and frontal vowel sound (monophthong). The sound of [e] is close-mid and that of [ɛ] is open-mid where as the sound of [æ] is produced with mouth open little wider than that of [ɛ]. For simplicity, the phonetic

sound (Author's) of [e] and [æ] are pronounced as *auh* (short& high-mid) and *ahuh* (short&low-mid) respectively. The sound of [ɑ:](written as ah in the spelling) in the spelling of the pronunciation is a long (monophthong), open, low and near back vowel sound. The sound of [ɑ:] is pronounced as *ahh* (long & low).

- d) The sound of [i:] (written as ee in the spelling) in the spelling of the author's pronunciation is a long (monophthong), close, high and frontal vowel sound. The sound of [ɪ] (written as i in the spelling) in the spelling of the author's pronunciation is a short (monophthong), close (open little wider than [i:]), high (pronounce little lower than [i:]) and frontal vowel sound. For simplicity, the phonetic sound (Author's) of [i:] and [ɪ] are pronounced as *ee* (long&high)(which is the primary sound of the vowel - e) and *eu*h (short&high) respectively. The sound of [i](written as *i* in the spelling) in the spelling of the author's pronunciation is a short (monophthong), close, high and frontal vowel sound. For simplicity, the phonetic sound (Author's) of [i] is pronounced as *ehuh* (short &high).
- e) The sound of [ə](full schwa) and [ɚ] (faint schwa) in the spelling of the author's pronunciation are both short, mid and central vowel sound, the only difference is that the sound of [ɚ] is produced little shorter than that of [ə]. For simplicity, the phonetic sound (Author's) of [ə] and [ɚ] are written as *uh* (short&mid) and *uh* (shorter and mid) respectively.
- The sound of [ʌ](written as u in the spelling) in the spelling of the author's pronunciation is a short (monophthong), open-mid, low-mid and near back vowel sound. The sound of [ʌ] is produced with mouth little more open and pronounced little lower than that of [ə]. For simplicity, the phonetic sound (Author's) of [ə] and [ʌ] are pronounced as *uh* (short & mid) and *uhh* (short and mid) respectively.
- The sound of [ɜ:]/[ɝ:](written as uuhh/ur in the spelling) in the spelling of the author's pronunciation is a long(monophthong), open-mid, low-mid and central vowel sound. The sound of [ɜ:]/[ɝ:] is produced with mouth little more open and pronounced little lower than that of [ə]. For simplicity, the phonetic sound (Author's) of [ə] and [ɜ:]/[ɝ:] are pronounced as *uh*(short& mid) and *uuhh/uuhhr* (long and mid) respectively.
- (f) The sound of [ɒ](written as o in the spelling) in the spelling of the author's pronunciation is a short (monophthong), close, low and back vowel sound. Using the concept of sub-syllables, the sound is pronounced as *ouh* (short). The sound of [ɔ:](written as aw in the spelling) in the spelling of the author's pronunciation is a long (monophthong), open-mid, low-mid and back vowel sound. For simplicity, the sound is pronounced as *oo* (long). The sound of [ɔ] (written as **aw** in the spelling) in the spelling of the author's pronunciation is a short (monophthong), open-mid, low-mid and back vowel sound. For simplicity, the sound is pronounced as *oo* (short). The sound of [u:](written as oo in the spelling) in the spelling of the author's pronunciation is a long (monophthong), close, high and back vowel sound. For simplicity, the sound is pronounced as *uhwoo* (long and high). The sound of [u](written as *uu* in the spelling) in the spelling of the author's pronunciation is a short (monophthong), close, high and back vowel sound. For simplicity, the sound is pronounced as *uhwu* (short and high). The sound of [ʊ](written as uu in the spelling) in the spelling of the author's pronunciation is a short (monophthong), close, high and near back vowel sound. For simplicity, the sound is pronounced as *uhwu* (short and high). The sound of [əʊ]/[oʊ] (written as oh in the

spelling) in the spelling of the author's pronunciation is a (diphthong, mid and central vowel sound)/ (diphthong, close-mid, high-mid and back vowel sound). For simplicity, the sound is pronounced as *uhuhwu*/*ouhwu* which is the primary sound of the vowel - o.

- (g) The sound of [ɔɪ] (written as oi in the spelling) in the spelling of the author's pronunciation is a diphthong, open-mid, low-mid and back vowel sound. The sound of [aʊ] (written as ou in the spelling) in the spelling of the author's pronunciation is a (diphthong, open, low and central vowel sound)/ (diphthong, open-mid, low-mid and front vowel sound). For simplicity, the sound of [ɔɪ] and [aʊ] are pronounced as *ouhy* and *ahuhwu*/*ahuhwu* respectively. The sound of [eɪ] (written as ay in the spelling) in the spelling of the author's pronunciation is a diphthong, close-mid, high-mid and frontal vowel sound. The sound of [aɪ] (written as I/y in the spelling) in the spelling of the author's pronunciation is a diphthong, open, low and frontal vowel sound. The sound of [aɪ] is produced with the mouth more wide open than that of [eɪ]. For simplicity, the sound of [eɪ] and [aɪ] are pronounced as *auhy* (which is the primary sound of the vowel - a) and *ahuhy* (which is the primary sound of the vowel - i) respectively.

**(ii). English IPA/the spellings of English IPA/the corresponding Author's phonetic symbols in the spellings of pronunciation/classification of vowels & consonants.**

English IPA/The spellings of English IPA/the corresponding Author's phonetic symbols in the spellings of pronunciation/classification of vowels & consonants by applying the Concept of Sub-Syllables. All vowels are voiced whereas some consonants are voiced and other consonants are voiceless.
